- Leadership
- Effective Communication
- Critical Thinking

PROJECTS

- Job Recruitment System Development

Developing a web-based Job Recruitment System as a final individual project. The system allows companies to post job vacancies, manage applications, and select candidates, while job seekers can search for jobs, apply online, and track application status. The project includes user authentication, job management, application tracking, and separate dashboards for administrators, companies, and job seekers.

Technologies Used: HTML, CSS, JavaScript, PHP, MySQL
